Publication Classification

(51) Int. Cl.⁷ G02F 1/1333

Disclosed are a liquid crystal display device and a method for assembling the liquid crystal display device. The liquid crystal display device has a display section for displaying images, a receiving container for receiving the display section, a power supplying section for supplying a power source to the display section, a signal converting section for converting signals from the display section and a fixing section for fixing the power supplying section and the signal converting section to the receiving container. The power supplying section and the signal converting section are disposed between the display section and the fixing section with directly facing to a rear surface of the receiving container. Accordingly, a total thickness and weight of the liquid crystal display device can be minimized and an assembly facility of the liquid crystal display device can be improved.
